22CDT41 - DATABASE MANAGEMENT SYSTEMS

DEPARTMENT OF COMPUTER SCIENCE AND DESIGN

KONGU ENGINEERING COLLEGE

(Autonomous)

PERUNDURAI ERODE-638060

MAY 2025

Problem Statement:

Helps users create and track their budget against actual spending. (RDBMS: Budget Items, Expenses; Backend: Budget creation, expense tracking, variance calculation)

Github Link:

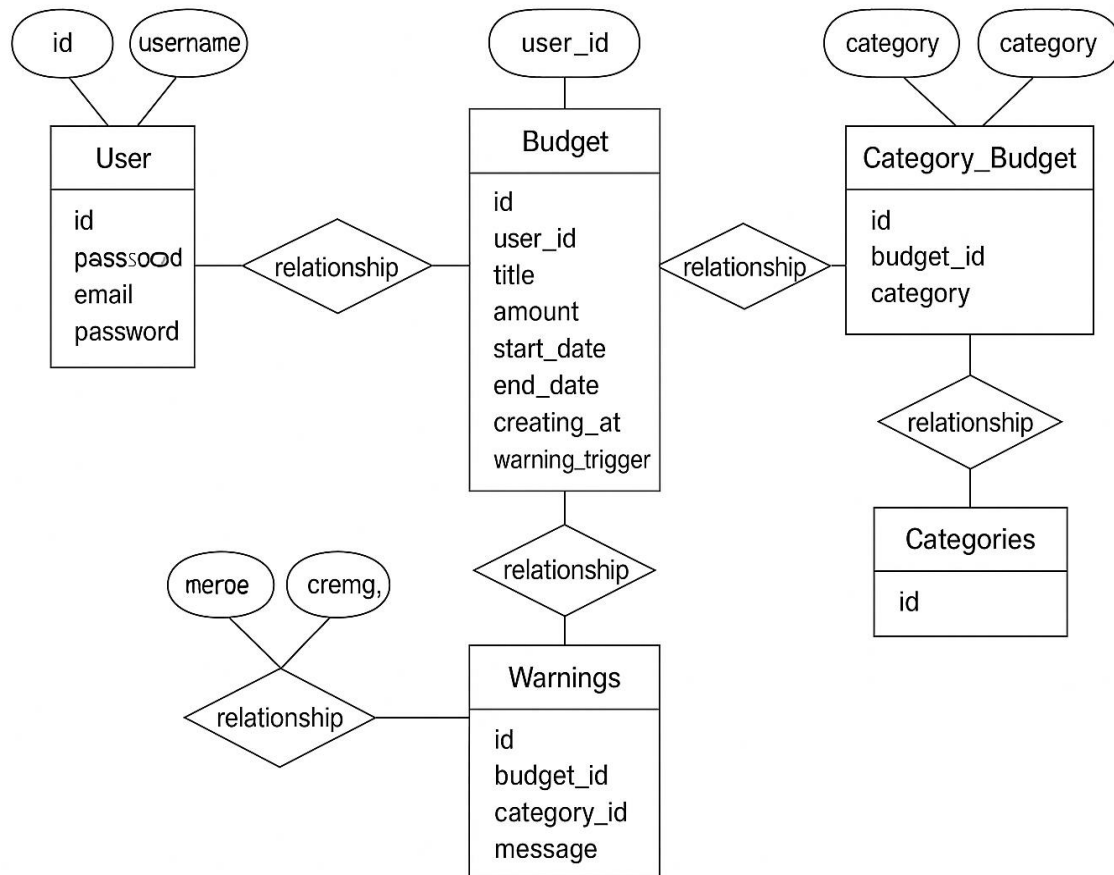

<https://github.com/Gokula14/Budgeting-Application->

<https://github.com/HARINI1404/Budget-application>

Modules and Description:

- 1) **User Authentication:** Enables secure user registration and login to protect personal financial data.
- 2) **Budget Creation & Management:** Allows users to create budgets, allocate funds to categories, and edit/delete budgets.
- 3) **Expense Tracking:** Records user expenses, categorizes them, and associates them with specific budgets for monitoring.
- 4) **Financial Overview:** Provides a dashboard summarizing budget status, expenses, and remaining balance for clear financial insights.
- 5) **Reporting and Alerts:** Generates reports on spending patterns and alerts users to potential overspending or budget warnings.
- 6) **Category-Based Analysis:** Allows users to view and analyze their budget and expenses organized by spending categories.

ER Diagram:

Programming Tools:

1. Frontend (User Interface)

- **Tools Used:** HTML, CSS, JavaScript, Bootstrap
- **Description :** These tools are used to create the structure, style, and interactivity of the web pages that users interact with in the budgeting application.

2. Backend (Server-side Logic)

Handles user requests, processes logic, and connects frontend to the database.:

- **Tools Used** : PHP
 - **Description** : PHP handles the behind-the-scenes logic, such as processing form data, managing sessions, and connecting with the database to execute core application functions.
-

3. Database (Data Storage)

- **Tools Used** : MySQL (via phpMyAdmin in XAMPP)
 - **Description** : MySQL is used to store, retrieve, and manage structured data like user profiles, income records, and expense entries, ensuring data integrity and fast access.
-

4. Visual Studio Code (VS Code)

VS Code provides a powerful development environment with syntax highlighting, debugging, extensions, and file management for building and editing project code efficiently.

5. Terminal / Command Prompt

Used to run XAMPP commands, navigate the project directory, and perform basic file or server operations needed during development

6. Google Chrome (or any modern browser)

Chrome is used to open and test the application in a web environment, with developer tools for inspecting elements, debugging scripts, and monitoring performance.

Database Design:

| Column Name | Data Type | Constraints |
|-------------|--------------|---------------------------------------|
| id | INT(11) | PRIMARY KEY, NOT NULL, AUTO_INCREMENT |
| username | VARCHAR(50) | NOT NULL |
| email | VARCHAR(100) | NOT NULL, UNIQUE |
| password | VARCHAR(255) | NOT NULL |
| created_at | TIMESTAMP | NOT NULL, DEFAULT CURRENT_TIMESTAMP |

| Column Name | Data Type | Constraints |
|-------------------|---------------|---|
| id | INT(11) | PRIMARY KEY, NOT NULL, AUTO_INCREMENT |
| user_id | INT(11) | NOT NULL, INDEX, FOREIGN KEY (user_id) references users(id) ON DELETE CASCADE |
| title | VARCHAR(100) | NOT NULL |
| amount | DECIMAL(10,2) | NOT NULL |
| start_date | DATE | NOT NULL |
| end_date | DATE | NOT NULL |
| created_at | TIMESTAMP | NOT NULL, DEFAULT CURRENT_TIMESTAMP |
| warning_triggered | TINYINT(1) | DEFAULT 0 |

| Column Name | Data Type | Constraints |
|-------------|---------------|---|
| id | INT(11) | PRIMARY KEY, NOT NULL, AUTO_INCREMENT |
| budget_id | INT(11) | NOT NULL, INDEX, FOREIGN KEY (budget_id) references budgets(id) ON DELETE CASCADE |
| category | VARCHAR(100) | NOT NULL |
| amount | DECIMAL(10,2) | NOT NULL |

| Column Name | Data Type | Constraints |
|-------------|--------------|---|
| id | INT(11) | PRIMARY KEY, NOT NULL, AUTO_INCREMENT |
| budget_id | INT(11) | NOT NULL, INDEX, FOREIGN KEY (budget_id) references budgets(id) ON DELETE CASCADE |
| category_id | INT(11) | DEFAULT NULL, FOREIGN KEY (category_id) references category_budget(id) ON DELETE SET NULL |
| message | VARCHAR(255) | DEFAULT NULL |
| created_at | TIMESTAMP | NOT NULL, DEFAULT CURRENT_TIMESTAMP |

| Column Name | Data Type | Constraints |
|-------------|--------------|---|
| id | INT(11) | PRIMARY KEY, NOT NULL, AUTO_INCREMENT |
| budget_id | INT(11) | NOT NULL, INDEX, FOREIGN KEY (budget_id) references budgets(id) ON DELETE CASCADE |
| category_id | INT(11) | DEFAULT NULL, FOREIGN KEY (category_id) references category_budget(id) ON DELETE SET NULL |
| message | VARCHAR(255) | DEFAULT NULL |
| created_at | TIMESTAMP | NOT NULL, DEFAULT CURRENT_TIMESTAMP |

SQL Query:

- Budget table:

```
CREATE TABLE budgets (
  id INT(11) NOT NULL AUTO_INCREMENT,
  user_id INT(11) NOT NULL,
  title VARCHAR(100) CHARACTER SET utf8mb4 COLLATE utf8mb4_general_ci NOT NULL,
  amount DECIMAL(10,2) NOT NULL,
  start_date DATE NOT NULL,
  end_date DATE NOT NULL,
  created_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,
  warning_triggered TINYINT(1) DEFAULT 0,
  PRIMARY KEY (id),
  INDEX (user_id));
```

- Categories table:

```
CREATE TABLE category_budget (  
  id INT(11) NOT NULL AUTO_INCREMENT,  
  budget_id INT(11) NOT NULL,  
  category VARCHAR(100) CHARACTER SET utf8mb4 COLLATE utf8mb4_general_ci NOT NULL,  
  amount DECIMAL(10,2) NOT NULL,  
  PRIMARY KEY (id),  
  INDEX (budget_id),  
  FOREIGN KEY (budget_id) REFERENCES budgets(id) ON DELETE CASCADE  
);
```

- Expences Table:

```
CREATE TABLE expenses (  
  id INT(11) NOT NULL AUTO_INCREMENT,  
  budget_id INT(11) NOT NULL,  
  category_id INT(11) NOT NULL,  
  amount DECIMAL(10,2) NOT NULL,  
  date TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,  
  warning_message VARCHAR(255) CHARACTER SET utf8mb4 COLLATE utf8mb4_general_ci,  
  PRIMARY KEY (id),  
  INDEX (budget_id),  
  INDEX (category_id),  
  FOREIGN KEY (budget_id) REFERENCES budgets(id) ON DELETE CASCADE,  
  FOREIGN KEY (category_id) REFERENCES category_budget(id) ON DELETE CASCADE  
);
```

- Users table:

```
CREATE TABLE users (  
  id INT(11) NOT NULL AUTO_INCREMENT,  
  username VARCHAR(50) NOT NULL,  
  email VARCHAR(100) NOT NULL,  
  password VARCHAR(255) NOT NULL,  
  created_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,  
  PRIMARY KEY (id),  
  INDEX (email)  
);
```

- Warnings:

```
CREATE TABLE warnings (  
  id INT(11) NOT NULL AUTO_INCREMENT,  
  budget_id INT(11) NOT NULL,  
  category_id INT(11) DEFAULT NULL,  
  message VARCHAR(255) COLLATE utf8mb4_general_ci DEFAULT NULL,  
  created_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,  
  PRIMARY KEY (id),  
  INDEX (budget_id),  
  FOREIGN KEY (budget_id) REFERENCES budgets(id) ON DELETE CASCADE,  
  FOREIGN KEY (category_id) REFERENCES categories(id) ON DELETE SET NULL  
);
```

Coding:

Login.php:

```
login.php <?php
session_start();
if ($_SERVER['REQUEST_METHOD'] === 'POST') {
    $host = "localhost";
    $user = "root";
    $pass = "";
    $db = "budget_app";
    $conn = new mysqli($host, $user, $pass, $db);
    if ($conn->connect_error) {
        die("✗ Connection failed: " . $conn->connect_error);
    }

    $email = mysqli_real_escape_string($conn, $_POST['email']);
    $password = $_POST['password'];

    $sql = "SELECT id, username, password FROM users WHERE email = ?";
    $stmt = $conn->prepare($sql);
    $stmt->bind_param("s", $email);
    $stmt->execute();
    $result = $stmt->get_result();

    if ($result && $result->num_rows === 1) {
        $user = $result->fetch_assoc();
        if (password_verify($password, $user['password'])) {
            $_SESSION['user_id'] = $user['id'];
            $_SESSION['username'] = $user['username'];
            header("Location: dashboard.php");
            exit();
        } else {
            $error = "✗ Invalid password!";
        }
    } else {
        $error = "✗ No account found with that email!";
    }
}
```

```
$stmt->close();
$conn->close();
}
?>

}
```

Output:

The screenshot shows a web browser window with the address bar displaying 'localhost/BUDGET/register.php'. The page has a solid purple background. In the center, there is a white rounded rectangle containing the 'Create Account' form. The form has the title 'Create Account' in bold. Below the title, there are three input fields: 'Username' with the placeholder 'Enter your username', 'Email' with the placeholder 'Enter your email', and 'Password' with the placeholder 'Enter your password'. Below these fields is a blue 'Register' button. At the bottom of the form, there is a link that says 'Already have an account? [Login](#)'.
